

Test Plan for Chaldal

Test Plan ID: TP-Chaldal-001

Introduction

This test plan describes how the Chaldal web application (<https://chaldal.com/>) will be tested, covering the goals, key areas, and steps to verify its features, security, performance, and cross-browser compatibility. As Bangladesh's leading online grocery delivery platform handling real-time orders and payments, it is critical to ensure the application works safely, reliably, and delivers a smooth shopping experience for users.

Application Overview

Chaldal is an online grocery and delivery web application based in Bangladesh. It allows users to order groceries, pharmacy products, and ready-to-cook meal kits (Cookups) for delivery within 1 hour. The platform serves over 100,000 families, operates 26 warehouses across Bangladesh, and supports features such as user accounts, cart management, coupon redemption, loyalty points (Egg Club), flash sales, and real-time location-based delivery.

Purpose

The primary purpose of this test plan is to ensure the quality and reliability of the Chaldal application by thoroughly evaluating its core modules and features. The testing process aims to confirm that the application functions correctly, is easy to use, performs efficiently under varying load conditions, and follows security best practices to protect user data and order/payment information.

Test Items

The following specific modules of the Chaldal application will be tested:

- Authentication & User Management: Login, Signup, Logout, Profile Management
- Product Browsing & Search: Category navigation, Search bar, Filters, Product detail pages
- Cart & Checkout: Add/remove items, quantity updates, Checkout flow, Address selection
- Order Management: Order placement, Order history, Order tracking
- Pharmacy Module: Product listing, search, and add-to-cart within the Pharmacy store
- Cookups Module: Browsing and ordering meal kits
- Offers & Coupons: Flash sales, coupon code redemption, Deal of the Day
- Egg Club / Loyalty: Points display, earning points on orders, redemption
- Location & Delivery: City/area selection, current location detection, delivery fee calculation
- Payment: Payment method selection, order confirmation
- Global Components: Header, Footer, Language toggle (EN / BN), Mobile responsiveness
- Help & Contact: Help page, complaint filing

References

Documents and standards referred to during test planning and execution:

- IEEE 829 Test Documentation Standard: For test case and documentation structure
- Chaldal Web Application: <https://chaldal.com/>

Features to be Tested

The following application features will be validated during testing:

- Core features: User registration, login, logout, and profile update
- Product catalogue: Browsing categories (Grocery, Pharmacy, Cookups), search and filter functionality
- Cart & Checkout: Adding/removing products, updating quantities, applying coupons, and completing orders
- Order Management: Order placement confirmation, order history, real-time tracking
- Location Services: City selection, auto-detect location, delivery availability check
- Promotions: Flash sales, Deal of the Day, Offers page, coupon validation
- Egg Club: Points earning, display, and redemption workflow
- Pharmacy & Cookups: Module-specific browsing and cart functions
- UI & Responsiveness: Header, footer, language switcher, mobile/tablet layout
- Security & Error Handling: Input validation, unauthorised access prevention, error messages
- Performance: Page load times, response under concurrent users

Features Not to be Tested

The following will be excluded from the current testing scope:

- Third-party payment gateway internal processing and bank-side integrations
- Mobile native applications (Android / iOS apps)
- Back-end warehouse management and inventory systems
- Admin or vendor-side dashboards
- Inventory Platform portal (separate enterprise product)
- Social media link destinations (external platforms)

Test Approach

The test approach will follow a phased process beginning with requirement analysis, test planning, and test case creation. Testing will be conducted in cycles covering functional, security, performance, and compatibility aspects. Defects will be logged and tracked to closure. Regression testing will be performed after bug fixes. No automated testing will be used at this stage; all testing will be conducted manually. Testing progress will be regularly monitored and reported to stakeholders.

Key testing types to be applied:

- Functional Testing: Verifying each feature against expected requirements
- UI/UX Testing: Layout, responsiveness, and language toggle (EN/BN)
- Performance Testing: Page load speed, cart and checkout response times
- Compatibility Testing: Chrome, Firefox, Edge on Windows and Linux

Entry Criteria

Conditions that must be met before testing can begin:

- Finalized and reviewed test requirements based on the live Chaldal application
- Test cases reviewed and approved by the QA Lead
- Test environment properly configured with required browsers and tools
- Test accounts (user credentials) created and available
- Test data (sample addresses, coupon codes, products) prepared

Exit Criteria

Conditions to be fulfilled before the testing phase can be closed:

- All critical and high-priority test cases have been executed
- No high-severity or blocker defects remaining open
- Test Summary Report completed and approved
- Regression testing completed after all critical bug fixes

Suspension Criteria

Situations when testing may need to be paused:

- Major blocker defects preventing further test execution (e.g., login broken, site down)
- Unavailability of test data, test accounts, or test environment issues
- Critical third-party service outages (e.g., location API, delivery service)
- Unplanned changes to the application mid-cycle without prior notice

Roles and Responsibilities

Outlines the responsibilities of each team member:

Role	Responsibilities
Test Lead	Responsible for planning, monitoring, and reporting the testing process. Approves test cases and final report.
QA Engineers	Execute test cases, log defects, and perform regression testing after fixes.
Developers	Fix reported defects and provide build notes for regression cycles.
Project Manager	Approve test plan, monitor overall progress, and communicate with stakeholders.

Schedule

A timeline for each phase of testing:

Phase	Timeline	Activities
Test Planning	Week 1	Define scope, identify test items, assign roles
Test Case Design	Week 2	Write test scenarios, test cases, and prepare test data
Test Execution	Weeks 3-4	Execute functional, UI, security, and performance tests
Defect Fixing & Regression	Week 5	Retest fixed bugs, perform regression, close verified defects
Test Closure	Week 6	Finalise test summary report, obtain approvals, archive all artefacts

Training

Training required for effective testing:

- **Domain Training:** Understanding the core functionalities of the Chaldal application, including grocery browsing, cart management, order workflows, coupon/loyalty systems, pharmacy module, and location-based delivery logic.
- **Process Training:** Guidelines on manual testing strategies, test case writing using IEEE 829 standards, defect logging, and regression testing techniques.

Test Environment

Details the hardware and software required for testing:

- **Hardware:** Windows and Linux machines with minimum 8 GB RAM and SSD storage
- **Browsers:** Google Chrome (latest), Mozilla Firefox (latest), Microsoft Edge (latest)
- **Network Conditions:** Standard broadband and throttled 3G simulation for performance testing
- **Test URL:** <https://chaldal.com/>

Test Deliverables

Lists the documents and reports generated during testing:

- Test Plan Document
- Mind Map (test scope visualization)
- Test Scenarios
- Test Cases and Test Data
- Test Execution Report
- Bug / Defect Report
- Test Summary Report
- Regression Test Results

Approvals

The following stakeholders have the authority to approve the test plan and test results:

- QA Lead
- Project Manager (PM)
- Development Team Lead

Glossary

Defines key terms used in this document:

Term	Definition
QA	Quality Assurance
PM	Project Manager
UAT	User Acceptance Testing
IEEE 829	IEEE Standard for Software Test Documentation
Egg Club	Chaldal's loyalty points and rewards programme
Cookups	Chaldal's ready-to-cook meal kit service
SUT	System Under Test
